

GP Telehealth: Your Health, Your Way

Dear valued Shareholder,

We are excited to be extending GP telehealth services to our shareholders through our strategic partners Click for Health.

Put simply, our provider services allows your patients in the clinic to access prioritized GP Telehealth services for the purpose of medical scripts and specialist referrals.

With a few simple clicks you can request doctor services ensuring your patients are not spending time in waiting rooms, not waiting days or in some cases weeks to see their regular GP. We have it all completed via telehealth within 30- 60 minutes of receiving a request.

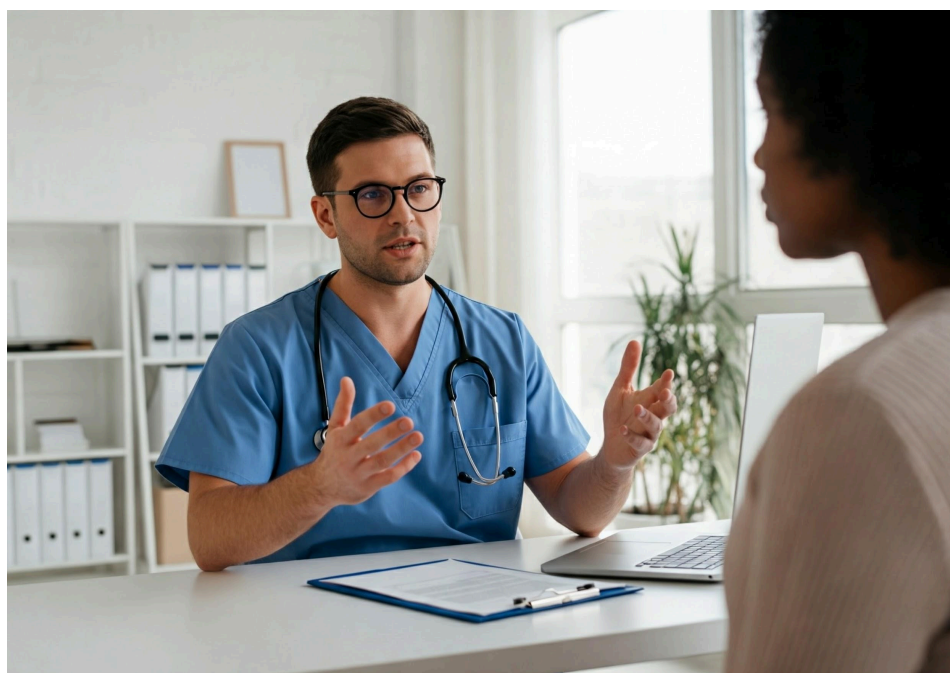

How does it work?

As a shareholder you are automatically registered on the CFH service platform for free which is accessible via the Pods Alliance portal.

You simply choose the telehealth service for your patient, for example, request a script. You provide the patient details, the patient receives a payment link, our doctors receive the request and call the patient to conduct the consultation. All completed end to end between 30-60 mins.

In the case of a script request, for example antibiotics for an infected toenail, at the completion of the consultation, our doctors will send an electronic script to the patient for them to dispense.

Like our pharmacy partners the Pods Alliance shareholders' requests are prioritised in the queue for immediate consultation.

What can I request?

You can request a script such as:

- Antibiotics for Ingrown (infected) toenails, general antibiotic creams /oral
- Prescription creams / lotions prescription pain medication (excluding Schedule 8 and substance of addiction)
- Antifungal prescriptions
- Rescripting of existing non schedule medication

You can request a range of specialist's referrals such as:

- To a foot and ankle surgeons
- A sports doctors
- Request MRI's
- Where possible Ultrasounds (Bulk billing)
- A vascular specialist
- Any other specialist referral

What are the benefits of our provider services?

Our shareholders and patients have told us that convenience and access to immediate and hassle-free care is important to them.

They have told us how getting appointments to see their regular GP can be days and for our more remote shareholders this can be weeks, further burdening the patient and the cycle of treatment.

The shareholders of Pods Alliance are now able to provide a service that manages the patients' journey reducing the time of getting access to primary care for consultations such as scripts and referrals.

The Click for Health platform already provides these services and more to the general public, with strong partnerships and successful delivery of similar arrangements to large pharmacy chains Australia wide.

We are the first allied health group in Australia to have access to these services through our strategic relationship.

What are the costs?

The cost of consultations with GP's have risen dramatically over the last 12 months. Bulk billing clinics are far and few between. Similarly with allied health, bulk billing is financially impossible to sustain.

A regular GP Telehealth consultation utilising our Click for Health platform is **\$49**, which in most cases less than the out-of-pocket gap for a face-to-face consultation. However, exclusive for the Pods Alliance shareholders, the GP telehealth consult is set at only **\$34.95**

This means the patient pays only \$34.95 for a prioritised telehealth consultation, jumping the queue, without having to make bookings, and multiple visits to see a GP.

Best Regards,
George Kallamalos
